HOW TO CHECK INTO A NET

1. Listen first — wait for net control to call for check-ins.
2. Key up, pause 1/2 second (let the repeater open), then talk.
3. Give: call sign (phonetically) · first name · city.
4. Add "no traffic" — or briefly state what you have.
5. UNKEY, then listen — net control will acknowledge you.

REPEATER ETIQUETTE & TROUBLESHOOTING

- Pause after keying — repeaters take ~1/2 s to come up.
- Leave 2 s between overs so others can break in.
- ID with your call sign every 10 min and at sign-off.
- Can't hear it? Out of range, or it needs a receive tone.

SKYWARN — WHAT TO REPORT

- Tornado, funnel cloud, or wall cloud
- Hail 1 inch (quarter) or larger
- Wind 58 mph+, or any wind damage
- Flash flooding / water over a roadway

Report: what · where (town + county) · when · your call sign
Listen first — never break into an active report.

HOW A REPEATER WORKS

offset: UHF +5 MHz · 2 m ±0.6 MHz
tone (PL/DCS) = the key that opens the door
height beats power — a 5 W HT works 40+ mi via tower
pause 1/2 s after keying before you talk

HOW MESHCORE WORKS (LoRa mesh)

SETTINGS — flash at flasher.meshcore.io (Companion=handheld, Repeater=fixed)
RADIO (Indiana preset): 910.525 · BW 62.5 · SF 7 · CR 5 · Hash 2B · TX 22 dBm

DMR IN 4 STEPS (digital voice)

1. Get your ham licence (Technician is enough).
2. Get a free DMR ID at radioid.net — it's your digital call sign.
3. Build the codeplug. Each channel needs FOUR things:
   Frequency · Color Code (like a PL tone) ·
   Time Slot (1 or 2) · Talkgroup (the "room")
4. Key up — the talkgroup routes you: local repeater or a
   $100 hotspot → BrandMeister → the world.

WHY IT'S DIFFERENT: 2 time slots = 2 conversations on one
repeater at once. Talkgroups = chat rooms spanning networks
(TG 3118 = all Indiana · TG 31189 = Crossroads · TG 91 = world).
One radio + one hotspot reaches every DMR net on earth.
